## Introduction

---

The garment sector in Cambodia is a major consumer of energy, accounting for approximately 10% of the country's industrial energy consumption <sup>1</sup>. Additionally, it is a significant emitter of greenhouse gases, with the Cambodian garment industry being responsible for approximately 3.8 million tons of CO2 equivalent emissions <sup>2</sup>.

To address the environmental challenges caused by the consumption of energy, adopting sustainable energy solutions is essential. However, industry owners are not well aware of the existing market and can find it challenging to implement such initiatives. Developing an extensive list of existing Energy Service Providers (ESPs) would enable factories to access information on these services more easily and effectively.

Based on an energy service company market survey and a garment factory survey by the project team in 2021, followed by a revision in 2023, 130 companies have been listed as potential suppliers to the garment sector.

The present document is a shortlist of ESPs that accepted to fill a form presenting comprehensive technical and commercial requirements, including recommended contacts, equipment capabilities, commercial terms, quality standards, garment sector experience, and project references. They were pre-selected on criteria such as previous engagement with the project, suitability for the project's needs, being based in Cambodia, experience in energy efficiency projects, and having listed contact persons.

In this document 8 systems are covered: compressed air systems (5), solar PV systems (8), lighting systems (5), Boiler and Steam Systems (9), Power System (5), air conditioning and ventilation systems (7), pump systems (3) and general engineering (11).

This publication has been made possible thanks to the **Switch Garment** and **VETHIC** projects.

**Switch Garment**, a project funded by the **European Union SWITCH-Asia Grants** Programme and jointly implemented by Global Green Growth Institute (GGGI) Cambodia, Textile, Apparel, Footwear & Travel Goods Association in Cambodia (TAFTAC) and Geres aims at 'Promotion of sustainable energy practices in the garment sector in Cambodia' ("Switch Garment"). The objective of this project is to increase the competitiveness and decrease the environmental impact of the Cambodian garment industry through sustainable production.

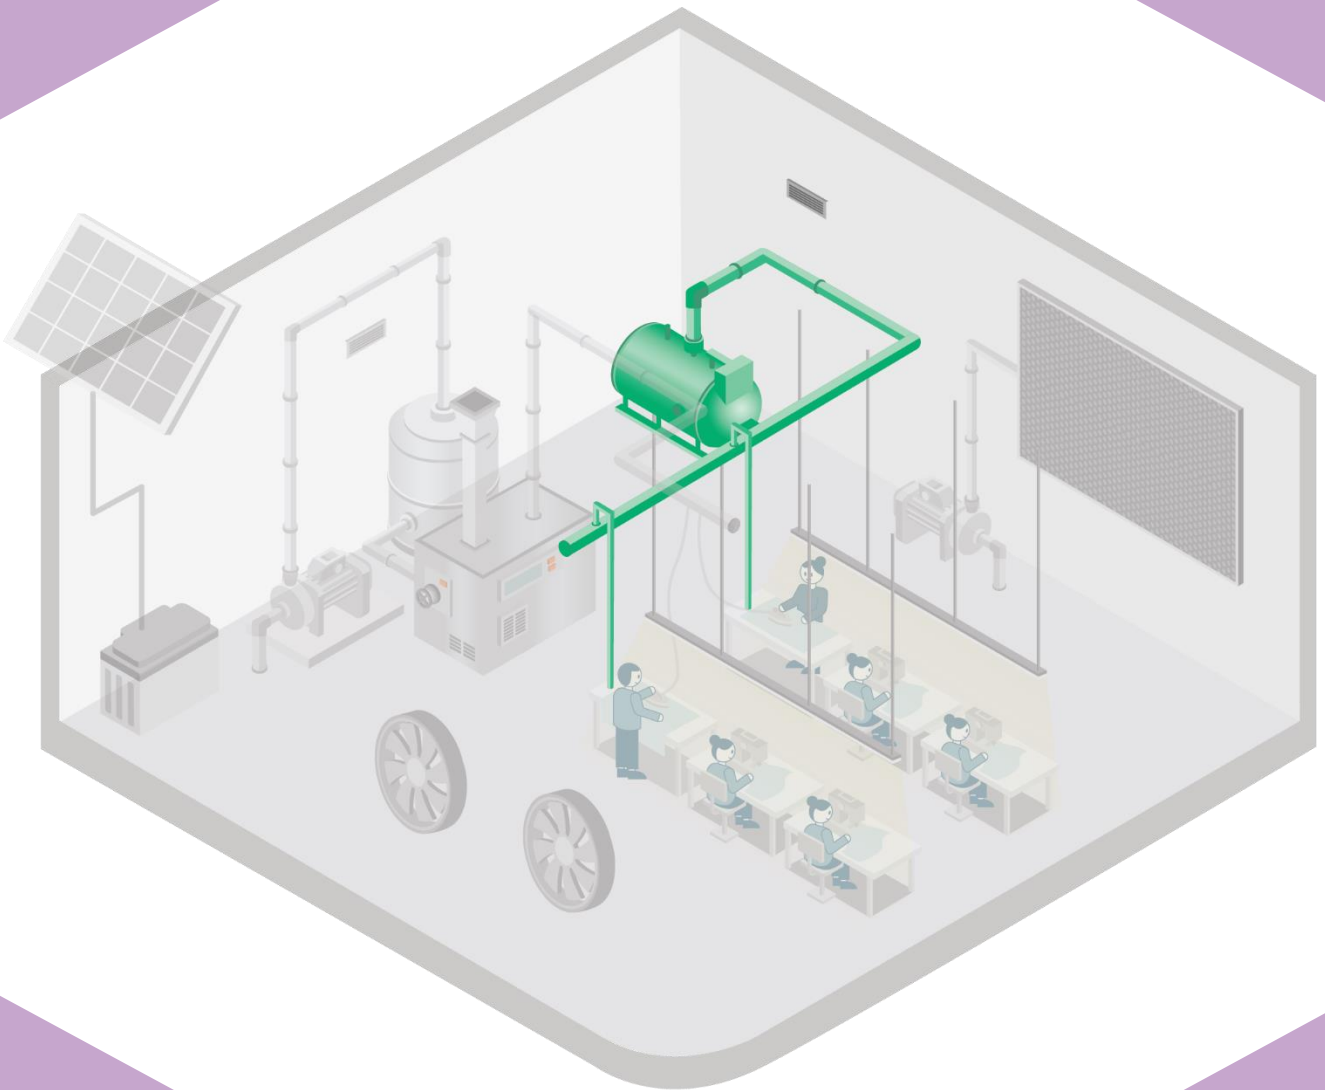

**VETHIC project** (2022-2024), funded by **Agence française de développement (AFD)**, aims to improve the environmental performance of the Cambodian textile sector by activating the levers of the energy transition. The project is jointly implemented by **Geres**, **TAFTAC**, **Cambodia Women for Peace and Development (CWPD)**, and **Live and Learn Cambodia (LLC)**.

#### b. Standards and certification

<b>Meet International Quality standards</b>	Yes, ISO or IEC depending on the solution.
<b>Meet International Energy Efficiency standards</b>	Yes, depending on the solution and requirements.

#### c. Project Experience

- Company has experience in energy savings projects
- Company has 10 years of experience with garment factories
- Company has experience with other industrial projects

**Edition:**

September 2023

**Developed by:**

Geres

**With the contributions of:**

This document has made possible thanks to the Switch Garment and VETHIC projects. They aim at providing hand-holding support to garment manufacturing units in the country to identify and adopt sustainable energy practices.

Switch Garment, a project funded by the European Union SWITCH-Asia Grants Programme and jointly implemented by Global Green Growth Institute (GGGI) Cambodia, Textile, Apparel, Footwear & Travel Goods Association in Cambodia (TAFTAC) and Geres aims at 'Promotion of sustainable energy practices in the garment sector in Cambodia' ("Switch Garment"). The objective of this project is to increase the competitiveness and decrease the environmental impact of the Cambodian garment industry through sustainable production.

VETHIC project (2022-2024), funded by Agence française de développement (AFD), aims to improve the environmental performance of the Cambodian textile sector by activating the levers of energy transition. The project is jointly implemented by Geres, TAFTAC, Cambodia Women for Peace and Development (CWPD), and Live & Learn Cambodia (LLC).

This document was developed with the inputs and extensive review provided by the partners GGGI and TAFTAC.
